

WHAT IS CLAIMED IS:

1. A cuff, comprising:  
a strap unit; and  
a ring attached to one end of the strap unit, wherein the direction of the ring is not  
5 perpendicular to an outstretch direction of the strap unit, and the strap unit is adapted to  
pass through the ring.
2. The cuff of claim 1, further comprising an air sac disposed inside the strap unit,  
the air sac comprising an air inlet.  
10
3. The cuff of claim 2, further comprising an air pump unit, connected to the  
air-pump opening, wherein air is delivered through the air inlet into the air sac.
4. The cuff of claim 1, further comprising a first adhering region and a second  
15 adhering region, wherein the first adhering region is disposed on a surface of the strap at  
one end further away from the ring than the second adhering region, and the second  
adhering region is disposed on the surface of the strap adjacent to the first adhering  
region.
- 20 5. A blood pressure measuring apparatus comprising:  
a blood pressure display unit;  
a cuff, comprising  
a strap unit; and

a ring fastened on one end of the strap, wherein the direction of the ring is not perpendicular to an outstretch direction of the strap unit, and the strap unit is adapted to pass through the ring;

5 a pressure sensing unit, disposed on the strap unit, for sensing the pressure inside the cuff.

6. The apparatus of claim 5, further comprising an air sac, disposed inside the strap unit, and the air sac comprising an air inlet.

10 7. The apparatus of claim 6, wherein the apparatus further comprises an air pump unit, connected to the air pump opening, wherein air is delivered through the air inlet into the air sac.

15 8. The apparatus of claim 5, further comprising a first adhering region and a second adhering region, wherein the first adhering region is disposed on a surface of the strap unit at one end further away from the ring than the second adhering region, and the second adhering region is disposed on the surface of the strap unit adjacent to the first adhering region.

20 9. The apparatus of claim 5, further comprising a mercury column.

10. The apparatus of claim 5, further comprising an electronic display unit.
